

API Query reply

S. No	Requirement	Query	Response
1	Proof of Approval	Please provide the approval letter in a colour scanned copy of either the original copy or a certified true copy of the original doc.	Please find the enclosed Annexure-I .
2	GMP certificate	Please provide GMP certificate (PICs copy) from the API manufacturer (Lee Pharma).	API manufacturing facility has been inspected with France and EDQM and our facility has been certified with Eudra GMP certificate, which is provided in Annexure-II .
3	CEP	Please provide CEP from Lee Pharma, if its available.	Please find the enclosed Annexure-I .
4	Description of Manufacturing Process and Process Controls	Using document: S2.2 Description of manu process & control, please include the typical production batch size.	Updated section S2.2 with below details provided in Annexure-III . Input: 270.00 ± 20.0 kg Theoretical molar yield: 237.65 ± 17.60 kg Expected molar yield: 195 ± 15.0 kg Molar Percentage yield: $82.05 \pm 0.85\%$ Percentage of yield range (with respect to obtained wt.): 0.72%
5	A) Specification of Drug Substance from drug product manufacturer	Using document: S4.1 Specification (dp), 1) please include the effective date of the document. 2) Please delete the test: Water content by KF (% , w/w) as it is a repeat.	1. In S4.1 Specification (dp) effective date is mentioned. 2. Corrected part of S4.1 Specification provided in Annexure-IV
6	A) Analytical Procedures from drug product manufacturer	1) Please provide the analytical procedures for these in-house methods: Description, Solubility, Residual on ignition, Phosphate content by potentiometry (on anhydrous), Residual solvents by GC (methanol, acetone, isopropyl alcohol, acetonitrile, methylene dichloride, methyl tertiary butyl ether, toluene, n—butanol, chloroform), acetic acid	1) Analytical procedures of Sitagliptin Phosphate USP by FPP manufacturer provided in Annexure-V Below mentioned test parameters are not part of our specification, as these are not official in USP monograph-

Sitagliptin Phosphate USP

		content by HPLC, NTPy/ NTTP nitrosamine impurity content by LC-MS 2) Please provide the compendial monographs for these compendial methods: identification by (UR, enantiometric purity by HPLC, phosphate test), water content by KF, enantiometric purity by HPLC (S- Enantiometer), Organic Impurities by HPLC (any individual impurity, total impurities), assay by HPLC (on anhydrous and solvent free basis)	Residual on ignition & NTPy/ NTTP nitrosamine impurity content by LC-MS. 2) Compendial monographs provided in Annexure-VI
7	A) Analytical Procedures from drug substance manufacturer	1) Please provide the compendial monographs for these compendial methods: identification by (UR, enantiometric purity by HPLC, phosphate test), water content by KF, enantiometric purity by HPLC (S- Enantiometer), Organic Impurities by HPLC (any individual impurity, total impurities), assay by HPLC (on anhydrous and solvent free basis)	Compendial monographs provided in Annexure-VI Enantiomeric purity by HPLC, Organic impurities by HPLC have adopted from USP-NF Sitagliptin Phosphate.
8	A) Validation of Analytical Procedures from drug product manufacturer	Please provide <u>separately</u> from the DP manufacturer, the validation of analytical procedures for these in-house methods: Solubility, Residual on ignition, Phosphate content by potentiometry (on anhydrous), Residual solvents by GC (methanol, acetone, isopropyl alcohol, acetonitrile, methylene dichloride, methyl tertiary butyl ether, toluene, n—butanol, chloroform), acetic acid content by HPLC, NTPy/ NTTP nitrosamine impurity content by LC-MS	Analytical procedure of Sitagliptin is in line with USP monograph and drug substance manufacturer and methods are validated by the API manufacturer. So, validation report is not necessary. Residual on ignition & NTPy/ NTTP nitrosamine impurity content by LC-MS test are not part of FPP manufacturer API specification.
9	B) Validation of Analytical Procedures from drug substance manufacturer	Please provide in addition, the validation reports for these test methods: solubility, residual on ignition.	As the solubility and residue on ignition are not quantitative method parameters, the validation report for solubility and residue on ignition is not necessary. Hence, it is not applicable.

Sitagliptin Phosphate USP

10	Stability Summary and Conclusions	1. Using the document: S7.1 Stability Summary and conclusions, please include in the conclusion of the stability studies, stress studies. 2. Please include in the site of manufacture for the stability batches.	1. We have performed forced degradation studies and prepared the report separately. The stress study conclusion available in the forced degradation report. Hence, it is not necessary to include in 3.2.S.7.1 section. 2. The stability batches have been analysed at the same manufacturing site of API.
11	Post-approval Stability Protocol and Stability Commitment	Using the document: S7.2 Post-approval Stability Protocol and Stability Commitment, please add in the statement below: If any results fall outside of the retest / shelf-life specifications, these should be reported together with the proposed action/ CAPA.	The statement mentioned in 3.2.S.7.2 section has been included in line with ICH Q1A R2 guideline: “<i>Stability Testing of New Drug Substances and Products</i>”. Hence, there is no necessity to include the requested statement.
